Allowable Subject Matter

Claims 1-20 are allowed. The statement of reasons for allowance follows. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Certain elements of independent claims 1 and 11 are disclosed in the prior art, but the examiner is not aware of any reference which discloses or suggests an apparatus or a method using all the recited elements simultaneously. The following references are considered relevant and are cited on the attached PTO-892 form: US 6195494 discloses a pulley or spool **58** and a cam plate **96** and associated cam followers **102/104**, but the cam assembly is used for providing access to the interior of a side panel **52**. No tensioning function is associated with the cam plate. US 6360050 discloses a tension control mechanism for fiber cables **165** which operates by rotation of a mount arm **153** as shown in figures 5 and 6, but the arm is attached to a frame **151** and is not manually movable to provide a selectable amount of tension. US 6584269 discloses a fiber cable tensioning apparatus including a cam member **28** which controls the tension applied by a weighted clamp **24** and support **22**. However, the reference does not disclose a pulley and the cable **100** is not characterized as a jumper cable connected to connection points. US 5894540 discloses a movable split-spool arrangement for accommodating slack fibers, but the spools are not rotatable as pulleys and no cam elements are involved. US 6434314 discloses a fiber tensioning apparatus (figures 1-3) including pulleys and a tensioner **58**. The reference does not mention a cam element associated with the tensioner.
